

Generated PDF Document

Introduction

This document was generated using **Node.js** and **Puppeteer**. It demonstrates how to create visually appealing PDFs by leveraging HTML and CSS for styling. Puppeteer effectively takes a "screenshot" of a webpage, but outputs it as a PDF.

Key Features

With this method, you can incorporate various HTML elements and CSS styles:

- Custom fonts (if hosted or system-installed and configured properly)
- Complex layouts using divs, flexbox, or grid
- Images and SVGs
- Styled text, headers, and paragraphs
- Background colors and borders

Example Section

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Duis aute irure dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla

pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

This approach offers great flexibility. The visual quality of the PDF is primarily limited by your HTML/CSS skills and the rendering capabilities of the Chromium engine.
